

GENERAL INFORMATION

1. NAME OF THE CENTER AND LOCATION

Novamed Ltd., Bulgaria, Sofia

2. TYPE OF THE RESEARCH INFRASTRUCTURE AND/OR SCIENTIFIC EXPERTISE

Identify the type of the RI, equipment/facilities/ specific research, and in particular linked to COVID-19:	Scientific equipment for biomedical and pharmaceutical research & development.... Apparatus represents an artificial one-chamber heart for conducting blood circulation outside the human body for therapeutic apheresis for human applications (plasma exchange, plasmapheresis, double-filtered plasmapheresis, haemoperfusion, selective plasmapheresis and protein imunoabsorption, destroyed proteins and cells, cytokines, bacteria and hepatitis virus type C, the coronaviruses group including SARS-CoV-2 (COVID-19 virus).The apparatus can be used for plasma separation for patients healed of COVID-19 and to produce an antibody (human immunoglobulin G) targeting COVID-19 treatment.
---	---

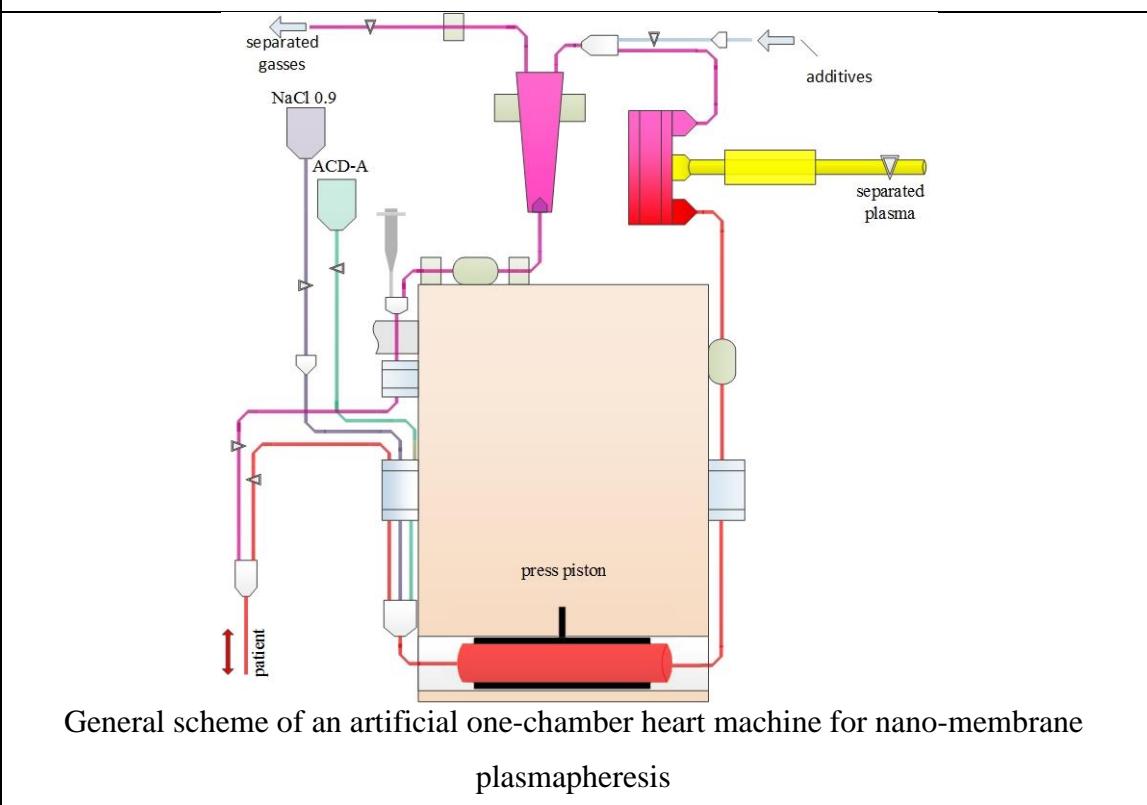

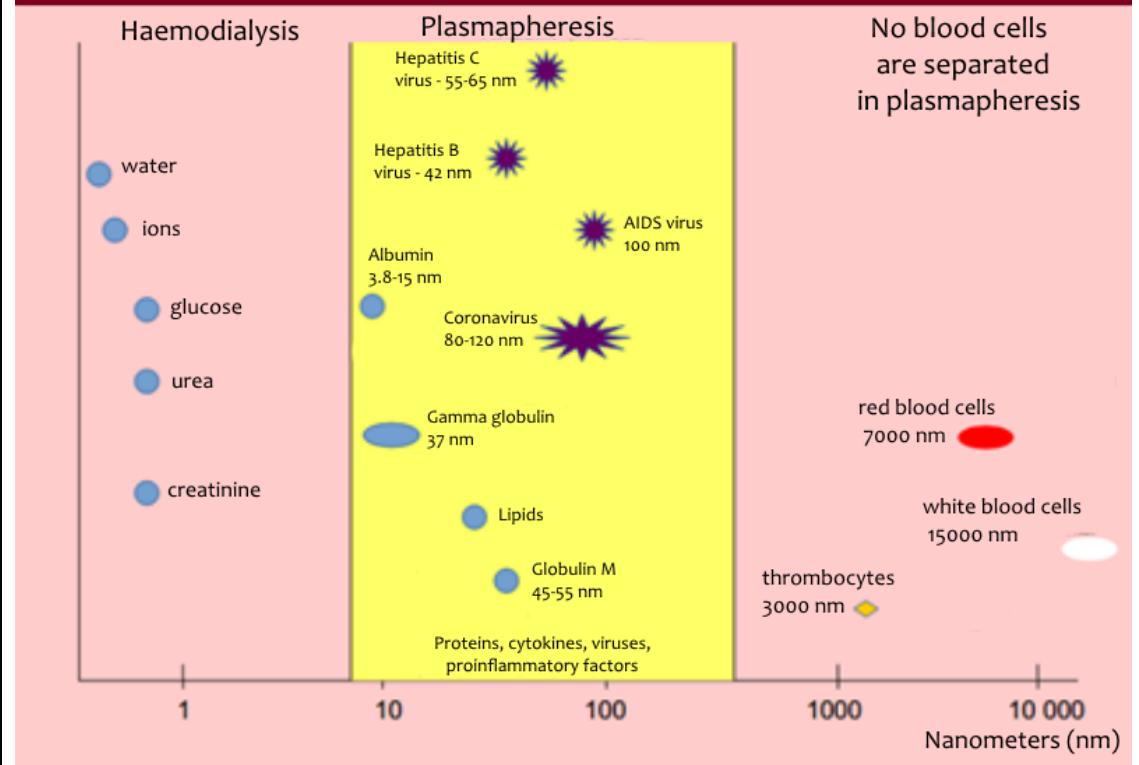

KEY WORDS:

Expertise in therapeutic apheresis for humans (plasma exchange, plasmapheresis, double-filtered plasmapheresis, haemoperfusion, selective plasmapheresis and protein imunoabsorption, destroyed proteins and cells, cytokines and oxidative stress. Nano membrane blood processing, plasma separation, Cyber-physical systems, High quality process control

3. TYPE OF THE RESEARCH

Provide information on the research carried on or planned in regard with COVID-19 and other viruses	Experimental research is finished. There are produced laboratory prototype, experimental model and certification model, registered Useful model № 2901 U1 dated 30.03.2018 r from Patent Office of Republic of Bulgaria. The apparatus is ready for production. Currently a small pre-production series of five apparatus is under production.

Membrane plasmapheresis – a therapeutic method

4. WEBSITE

Provide the internet address:

nanopher.com

5. BACKGROUND, PUBLICATIONS AND OPEN DATA REPOSITORY

leading research team AND Scientific publications of the research group on the topics of related to coronaviruses research results; **link to open data repository**

The leading research group is mentioned in the Useful model registration document № 2901 U1. Other researchers from different Bulgarian universities and the BAS participate as well.

Scientific publications of the research group

1. Albena Momchilova, Zlatan Tsonchev, Mariana Hadzhilazova, Rumiana Tzoneva, Alexander Alexandrov, Dimitar Nikolakov, Viktoria Ilieva, Roumen Pankov. Sphingolipid metabolism is deregulated in erythrocytes from multiple sclerosis patients. Comptes rendus de l'Académie bulgare des Sciences. Tome 73, No 3, 2020
2. Boris Tenchov, Rumiana Koynova, Borislava Antonova, Stella Zaharinova, Silviya Abarova, Zlatan Tsonchev, Regina Komsa-Penkova, Albena Momchilova. Blood plasma thermal behavior and protein oxidation as indicators of multiple sclerosis clinical status and plasma exchange therapy progression. Thermochimica Acta, 671, 2019, 193-199
3. Uzunova, V. Tzoneva, R. Stoyanova, T. Pankov, R., Skrobanska, R., Georgiev, G., Maslenkova, L., Tsonchev, Z. Momchilova, A. Dimethylsphingosine and miltefosine induce apoptosis in lung adenocarcinoma A549 cells in a synergistic manner. Chemico-Biological interactions, 310, art.no.108731
